

Living Handbooks

Scientific handbooks in a multimedia format

ZB MED uses the online PUBLISSO platform to publish open access handbooks and manuals from the full spectrum of life science disciplines. PUBLISSO offers the ability to incorporate multimedia content and update individual chapters without having to republish the entire book, providing a genuine 'living handbook' experience. Authors can add their own handbooks to PUBLISSO using the Drupal content management system. The quality of the handbooks is upheld by editorial boards specialising in each specific field as well as a mandatory peer review process. All the content is open access, which means it is freely available online at no charge.

Benefits of Living Handbooks:

- ▶ Academics and researchers retain the rights to their publications.
- ▶ Each individual chapter can be published and updated separately.
- ▶ Multimedia content can be incorporated in the chapters.
- ▶ Persistent identifiers known as DOIs, or digital object identifiers, are assigned to each chapter, making them easily citable and permanently accessible and traceable.

Are you interested in producing your very own Living Handbook? Please get in touch to find out how we can help!
